TECHNICAL SKILLS

Languages: Python, SQL, Java, C/C++

Data/ML: Pandas, NumPy, scikit-learn, HuggingFace, TensorFlow, OpenCV, NLTK

Cloud & Orchestration: GCP, Airflow, Hadoop, Spark

DevOps: Docker, Kubernetes, Git/Bitbucket, CI/CD, Jira

BI/Analytics: Power BI, DAX, KPI Design, Data Modeling, Documentation

Tools: DBeaver, Jupyter, Excel, Confluence

EDUCATION

University of Windsor

Master of Science in Computer Science - Co-op

Jan. 2022 - Jan. 2024

Windsor, ON

Gujarat Technological University

Bachelor of Engineering in Computer Engineering

Aug. 2017 - Jul. 2021

Vadodara, IN

EXPERIENCE

Data & Analytics Associate

Scotiabank

Jun 2024 - Present

Toronto, ON

- Data Scientist, CFA (Oct. 2025 – Present): Proactively analyzed operational risk events with NLP to identify systemic gaps and recommend mitigation strategies.
- BI Analyst, IB (Feb. 2025 – Oct. 2025): Implemented reusable SQL layers and KPI frameworks, driving consistency and audit-readiness for international dashboards.
- Data Engineer, AE (Jun. 2024 – Feb. 2025): Led the resolution of critical data gaps and optimized analytics pipelines to improve reporting accuracy across markets.
- Delivered actionable insights across multiple domains, influencing process improvements and reducing organizational risk exposure.

Data Analyst Intern, CCR Measurement

Scotiabank

Sep. 2022 - Dec. 2022

Toronto, ON

- Transitioned an internal portfolio backtesting tool from Perl to Python.
- Tested and validated the new tool, reducing time complexity by 80%.
- Collaborated with inter-departmental teams to ensure smooth migration of data.

Graduate Teaching Assistant

University of Windsor

Jan. 2022 - Dec. 2023

Windsor, ON

- Led UNIX/systems labs (40 students/term).
- Created grading rubrics and reference solutions, improving feedback quality and consistency.

PROJECTS

Adaptive Loan Pricing Engine | *Causal Inference, Optimization, Docker*

Nov. 2025 - Jan. 2026

- Built an adaptive pricing engine optimizing APRs using default risk, price elasticity, and conversion under regulatory constraints.
- Engineered synthetic acceptance data (15x scale-up) to correct selection bias and enable demand estimation across interest rates.
- Implemented optimization achieving 50 bps yield uplift while forcing a 20% prob. of default cap.
- Simulated portfolio-level pricing scenarios to validate profitability-risk trade-offs.

Data Science Salary Estimator | *Python, sk-learn, Pandas*

Jan. 2022 - May. 2022

- Developed a system to estimate Data Scientist salaries using 1,000+ Glassdoor postings.
- Optimized regressors with GridSearchCV, achieving a 40% compared to baseline.
- Productionized the model as a REST API using Flask for real-time salary estimation.
